## ABOUT

Computer Science student with a foundational understanding of web applications and modern software systems. Experienced in building and working with web-based projects using HTML, CSS, JavaScript, APIs, and SQL. Comfortable analyzing issues, understanding system behavior, and approaching problems in a structured way. Known for clear communication, adaptability, and a strong willingness to learn while working collaboratively in team environments.

## SKILLS, CERTIFICATES AND BLOGS

**Technologies:** C++, HTML, CSS, JavaScript, API's, SQL.
**Core Skills:** Basic Understanding of Web Applications, Working with APIs at basic level, Analyzing simple data Using SQL(Basic).
**Soft Skills:** Customer-first mindset, Willingness to learn, Problem-Solving Skills, Adaptability, Attention to Details, Team Collaboration.

## PROJECTS

**ChickenWorld** Dec 2025 - Jan 2026
**FRONT-END DEVELOPMENT**
Vendor Management Website | HTML, CSS, JavaScript, SQL, Vercel, GitHub

- Developed a multi-role vendor management web platform with three user modules: Customer, Vendor, and Admin.
- Designed and implemented role-based access where the Admin can assign permissions and manage users as customers, vendors, or administrators.
- Built responsive frontend pages using HTML, CSS, and JavaScript to support smooth navigation and interactive user experience.
- Created structured data handling using SQL concepts for managing products, vendors, and user-related information.
- Implemented vendor features such as product management, order handling, stock updates, and live order status updates.
- Enabled customer features including browsing vendor products, placing orders, and real-time order tracking.
- Added an order notification system where vendors can update order stages like Cooking Started, Order Ready, and Delivered, and customers receive updates track order.
- Deployed the project using Vercel and maintained version control with GitHub, improving understanding of real-world development workflows.

**PlayPoints** Oct 2021 - Nov 2022
**FRONT-END DEVELOPMENT**
Gaming Dashboard Platform | HTML, CSS, JavaScript, SQL, Vercel, GitHub

- Developed an interactive Gaming Dashboard web application with two main modules: User and Admin, providing role-based access and a smooth gaming experience for players.
- Implemented a reward-based system where users can earn points while playing games, and the updated scores are reflected instantly on the personal dashboard.
- Designed a responsive and visually engaging interface using HTML and CSS, ensuring proper layout, usability, and smooth navigation across devices.
- Used JavaScript to handle dynamic gameplay interactions, real-time score calculation, dashboard rendering, and user activity updates.
- Applied structured data handling with SQL concepts to manage user profiles, game score records, reward history, and overall performance tracking.
- Integrated additional features such as leaderboard display, score history, and competitive ranking to increase user engagement and motivation.
- Built an Admin panel that allows administrators to monitor users, manage game activities, and control point distribution rules efficiently.
- Deployed the complete project online using Vercel and maintained the development workflow through GitHub, strengthening deployment and version control skills.

## EDUCATION

**B.Tech in Computer Science & Engineering**, Lovely Professional University Phagwara Aug 2023 - Jun 2027
**CGPA:** 6.8 / 10
